Follow-up transcript: Irrigation zone observation records

Session date: September 18, 2026
Session: COR-832434
Review lead: Arthur Garcia / review lead
Reporting participant: Kathy House / Grounds coordinator
Operating participant: Kimberly Tucker DDS / Utilities conservation lead

---

Arthur Garcia: This follow-up returns to Irrigation zone observation records. Trigger: The controller export, zone map, and grounds walk describe wet and dry areas with different identifiers and do not show whether rainfall or a skipped cycle affected the observation.

Kathy House: Review scope: Review covers zone identifiers, controller events, visible distribution, weather notes, mapped planting areas, and the planned follow-up for the site grounds. Question remains: Which zone, timing, or weather record prevents the team from explaining the observed irrigation pattern?

Donald Martinez: I am comparing the response with Irrigation controller schedule, zone map, and grounds walk log (SRC-628524).

Arthur Garcia: What evidence changed or remains unchanged?

Kathy House: The controller log shows a rain hold, but the weekly grounds sheet says the zone was skipped without a reason. The two records do not identify the same date or operator. Limitation: A visual walk cannot establish pressure, flow, water quality, plant-health cause, or the need for a particular repair or adjustment.

Kimberly Tucker DDS: Current constraint: The normal watering window overlaps a public grounds event. Handling decision: Defer the observation to an agreed operating window and keep the missed window visible in the log.

Arthur Garcia: What correction is still open?

Kimberly Tucker DDS: Link the rain-hold event, date, and operator note and leave the skipped-cycle explanation qualified if no source confirms it.

Kathy House: Next step: Ask the grounds coordinator to name the operator and replacement observation time.

Arthur Garcia: What verification is due?

Kathy House: Return the verification result by September 21, 2026. Required check: Compare the next weekly sheet with the controller export before carrying a skipped cycle into the seasonal summary.
